

MILESTONE M2

Testing observations

Photo evidence and follow-up points

M2 validated

Overall results are satisfactory. The observations in this document do not block milestone validation and should be retained for the next development stages.

01 Two false negatives

Asian hornets were classified as probable non-target insects because of the crabro chromatic rule.

02 Distant structures

Keep the correct green verdict, but suggest a closer or zoomed-in photo when a structure is detected too far away.

03 503 errors and latency

Identify the exact source, measure each processing stage and assess retry and latency improvements.

CASE 1

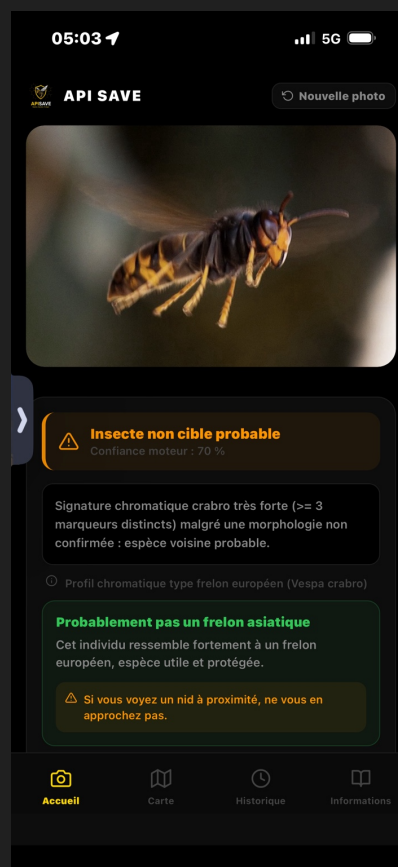

Asian hornet classified as non-target

The source image shows an Asian hornet. ApiSave returned a probable non-target result and applied a strong Vespa crabro chromatic signature.

Original test image

Expected: Asian hornet

ApiSave result

Observed: probable non-target / crabro

FOLLOW-UP FOR THE NEXT STAGE

Keep this image/result pair in the regression-test set. Review whether the crabro exclusion rule is overriding visible Asian hornet markers too strongly.

M2 remains validated; this case should be preserved for future correction.

CASE 2

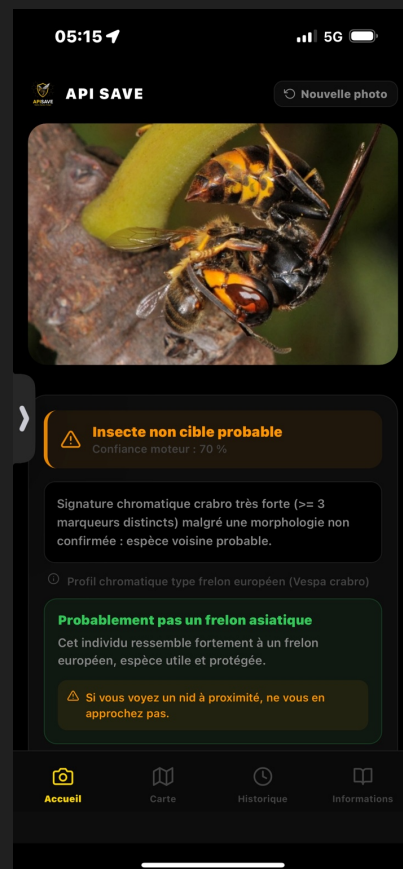

Asian hornet classified as non-target

The source image shows an Asian hornet. ApiSave returned a probable non-target result and applied a strong Vespa crabro chromatic signature.

Original test image

Expected: Asian hornet

ApiSave result

Observed: probable non-target / crabro

FOLLOW-UP FOR THE NEXT STAGE

Keep this image/result pair in the regression-test set. Review whether the crabro exclusion rule is overriding visible Asian hornet markers too strongly.

M2 remains validated; this case should be preserved for future correction.

GUIDED RETAKE

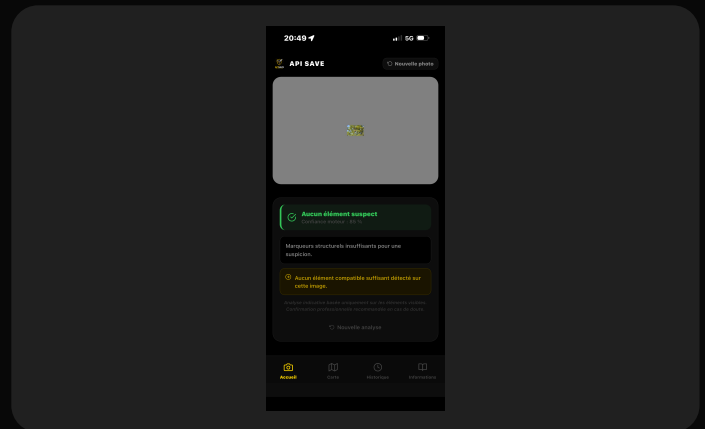

Preserve green; suggest a closer photo

In both examples, the green verdict is correct. When a structure is detected but remains too small or too distant for reliable assessment, ApiSave should offer a guided retake without changing the verdict to orange.

Distant structure example 1

Original image

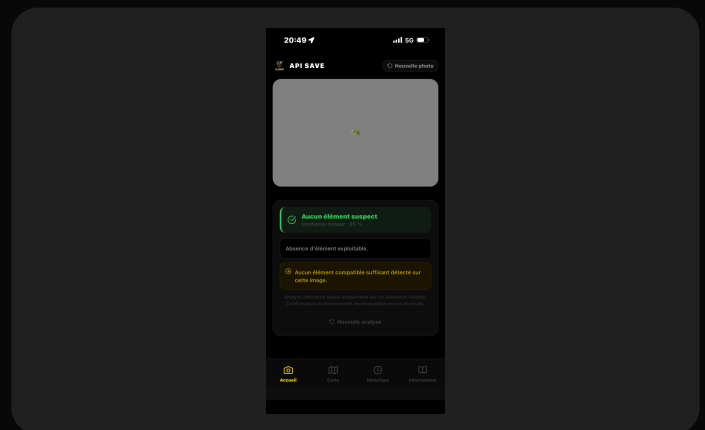

Correct green verdict

Distant structure example 2

Original image

Correct green verdict

SUGGESTED USER MESSAGE

"A distant structure has been detected. Zoom in or take a closer photo for a more precise analysis."

The current result remains GREEN unless sufficient suspicious structural markers are detected.
